

SECI'S GREEN WAVE
ENERGIZING A SUSTAINABLE INDIA

Shri Pralhad Joshi
Hon'ble Cabinet Minister of New and Renewable Energy and Consumer Affairs, Food and Public Distribution

Solar Energy Corporation of India Limited (SECI), a Navratna Central Public Sector Enterprise under the Ministry of New and Renewable Energy (MNRE), is at the forefront of India's renewable energy revolution, driven by the visionary leadership of Hon'ble Prime Minister Shri Narendra Modi and the guidance of the Ministry led by Shri Pralhad Joshi.

SECI was created in 2011 to implement the National Solar Mission, but its mandate today spans facilitation, development and power sale for a broad spectrum of renewable energy technologies across India. As a Navratna CPSE and a Category-I power trading licensee, SECI combines policy execution with commercial acumen, enabling it to design bankable projects, aggregate demand and ensure that renewable power reaches diverse consumers at competitive prices.

The corporation's vision is to be the global driving force in energy transformation towards a greener planet, empowering people and organisations to achieve energy security through clean power. Its mission emphasises pioneering accessible, reliable and scalable renewable solutions, harnessing innovation, and extending the benefits of renewable energy to even the remotest corners of the country, while building long-term stakeholder trust through responsible and sustainable practices.

Journey from inception to Navratna

SECI's institutional journey reflects India's rapid rise in the global renewable energy landscape over the past decade. From commissioning an early **10 MW solar CAPEX project** and initiating **competitive bidding for wind**, SECI quickly transitioned into a commercially viable entity, achieving profits and steadily expanding its portfolio of projects and tenders across solar and wind segments.

Over the years, SECI has crossed several historic milestones: it recorded double-digit profit in crores, attained **Miniratna classification** and **Navratna** status in recognition of its sustained financial strength and governance standards. By FY 2024-25, SECI had helped commission around **30 GW of renewable capacity** while signing more than **60 GW of Power Sale Agreements (PSAs),** demonstrating its central role in driving India's clean energy build-out at scale.

Innovative tender models and grid solutions

A defining feature of SECI's contribution has been its pioneering tender designs that respond to the evolving needs of the grid and distribution companies. Moving beyond plain solar or wind projects, SECI has introduced solar-wind hybrid tenders, Round-the-Clock (RTC) renewable power, assured peak power supply products, **Firm and Dispatchable Renewable Energy (FDRE), standalone Energy Storage System (ESS)** projects, and solar-plus-storage configurations.

These innovative models smartly integrate generation from multiple resources with storage to address intermittency and provide DISCOMs with dependable, high-quality power precisely when required. **Solar-wind hybrids,** for instance, exploit complementary generation profiles, while ESS and **solar-plus-storage projects** are tailored for peak demand management and grid balancing, thereby enabling higher renewable penetration without compromising reliability.
