

₹1,210.80 crore, supported by ₹305 crore in state-backed financial aid and an additional ₹36.97 crore in subsidies.

These mills are now moving towards modernisation. Karnal Sugar Mill underwent a ₹263 crore expansion, increasing capacity from 2,200 to 3,500 TCD and adding an 18 MW co-generation power plant. Panipat Sugar Mill followed suit with a ₹354.94-crore upgrade, with a capacity of 5,000 TCD and 28 MW power generation.

The other notable developments include an ethanol plant in Meham with a 60 KLPD capacity, operational since 2021, and proposed ethanol units in Kaithal, Jind, Rohtak, Gohana, Sonipat and Palwal—collectively estimated to cost ₹1,200 crore with a combined capacity of 690 KLPD.

Digital efficiency has also reached the mills. With the introduction of online token systems, farmers now save 10–12 hours per trolley when delivering sugarcane, resulting in both time and cost savings.

Recognition has followed these efforts. Kaithal Sugar Mill won the national award for cane development in 2020–21, while Meham received accolades for technical efficiency. Karnal continued this legacy, securing national recognition for technical efficiency for two consecutive seasons (2022–23 and 2023–24).

Moreover, the surplus power generated—12.54 crore units in 2024–25—was sold for ₹69.95 crore, demonstrating economic sustainability of these reforms.

Amid this progress, the government did not overlook the unexpected. When a fire in May 2025 damaged 323.43 acres of Rabi crops in 17 districts, the administration promptly compensated 151 farmers with ₹43.48 lakh—marking the first such proactive action in the state's history.

HORTICULTURAL REVOLUTION

Over the past decade, Haryana has experienced a quiet revolution in its agricultural landscape, driven by an increasing focus on horticulture. To encourage and incentivise farmers to take to horticulture, the state government introduced substantial subsidies: ₹25,500 per acre for general-density orchards, ₹43,000 per acre for high-density orchards, and up to ₹1,40,000 per acre for date palm plantations.

From 2014–15 to 2025–26, over 2.58 lakh acres have been brought under the cultivation of fruits, vegetables, flowers, and spices, transforming Haryana into a vibrant hub for horticulture.

In order to support this transformation, the state launched the Crop Cluster Development Programme, identifying 448 crop clusters. These clusters are designed to integrate production and distribution, each featuring an integrated pack house for post-harvest handling, storage, and direct market access.

While 40 integrated pack house projects have already been completed, 44 more are underway. Farmers and Farmer Producer Organisations (FPOs) are also being given subsidies to build these pack houses, ensuring that the green revolution reaches every corner of the state.

In 2019–20, pomegranate and date palm crops were added to the scheme, followed by fig (anjeer) in 2021–22. With 70% assistance for planting tissue-culture date palm saplings, farmers began reclaiming barren land, revitalising neglected fields.

WATER MANAGEMENT

The Haryana Government has undertaken a series of impactful initiatives to ensure effective conservation, regulation, and management of water resources across the state, as follows:

ESTABLISHMENT OF THE HARYANA WATER RESOURCES AUTHORITY (HWRA)

In 2020, the state government established the Haryana Water Resources Authority to oversee the integrated management of groundwater and surface water. The Authority aims to ensure long-term water security and sustainability across Haryana.

NATIONAL RECOGNITION: WATER DIGEST AWARDS 2023-24

For its excellence in groundwater regulation and management, Haryana received the “Best Initiative in Groundwater Regulation and
