

LIGHTING UP MILLIONS OF HOMES IN VILLAGES, CITIES

Haryana emerging as a leader in green energy

Over the past decade, Haryana has transformed its power sector, progressing from universal household electrification to becoming a leader in sustainable energy. Two key players—Haryana Vidyut Prasaran Nigam (HVPNL) and Haryana Power Generation Corporation Limited (HPGCL)—have been instrumental in lighting up cities and villages alike while preparing for a clean energy future.

In 2014–15, the state had about 54.91 lakh electricity consumers. By October 2025, this number had grown significantly to 83.18 lakh, highlighting the expansion of energy access across Haryana. Even low-income households consuming up to 100 units per month, now receive electricity at highly subsidised rates, demonstrating the government's commitment to make power affordable to all.

SUPPORT FOR FARMERS AND SAFER POWER INFRASTRUCTURE

In order to ease the burden on farmers, the government has waived charges for stolen or damaged transformers. The HVPNL has undertaken a major safety initiative by relocating overhead power lines passing over homes, schools, and water bodies. Out of 3,151 such hazardous lines, 3,144 have already been shifted. Over ₹151 crore has been invested in this public safety project.

BIOMASS PELLETS FROM PADDY STRAW

In a significant step towards cleaner energy, the HPGCL began using biomass pellets from paddy straw at its thermal plants to combat stubble-burning and pollution. Since mid-2023, more than 193 million metric tonnes have been procured. By July 2025, over 1.8 lakh metric tonnes had already been co-fired with coal. This helps curb emissions and create income opportunities for farmers.

Despite the 2022–23 coal shortage, the working of thermal plants remained uninterrupted. The Yamunanagar Plant earned accolades for energy conservation, while Hisar's Rajiv Gandhi Plant was recognised nationally for converting its hydrogen unit into an oxygen facility during COVID-19—an innovation that saved many lives.

TRANSMISSION EXPANSION AND PERFORMANCE

The HVPNL has expanded transmission infrastructure extensively since 2014. It has commissioned 76 new sub-stations, installed 667 transformers, and laid 2,800-km transmission lines, backed by over ₹5,284-crore investment. Another ₹5,936 crore will fund 42 more sub-stations and 1,827 circuit km of lines over five years.

Transmission system availability now stands at 99.6%, well above the national average. AT&C losses have dropped from 30.3% in 2015–16 to just 9.97%. Initiatives like the Feeder Sanitation Programme and Mhara Gaon, Jagmag Gaon have reduced power theft and ensured 24-hour electricity in 6,017 villages.

CONSUMER-CENTRIC REFORMS

To boost transparency and ease the financial burden on consumers, Haryana's DISCOMs have introduced several schemes.

Know Your Bill & Helpline: Helps consumers understand bills and resolve issues via toll-free
