numbers 1912 and 1800-180-1550.

Trusted Meter Reading & Pre-Paid Meters: Improves billing accuracy and allows prepaid usage.

Voluntary Load Enhancement – 2025: Farmers can raise load capacity by paying ₹100/kW. First 1,500 units are service charge-free.

Scheme for Antyodaya Families: For households earning under ₹1 lakh/year and using up to 150 units monthly, this initiative cleared dues for 43,452 consumers by July 2025.

CLEAN ENERGY AND RURAL EMPOWERMENT

Haryana has made big strides in renewable energy to boost clean power generation and support rural development.

Solar Projects: So far, 430 MW of ground-mounted solar power projects have been installed across the state. Solar plants with a total capacity of 2 MW, have also been set up in 330 registered cow shelters at a cost of ₹9.19 crore.

Solar Pumps for Farmers: In 2016–17, 750 solar pumps were given 90% subsidy. In 2018–19, 2,300 more were added with 75% subsidy. Under the PM-KUSUM scheme, a total of 1,61,837 solar pumps have been installed, increasing energy access for agricultural activities.

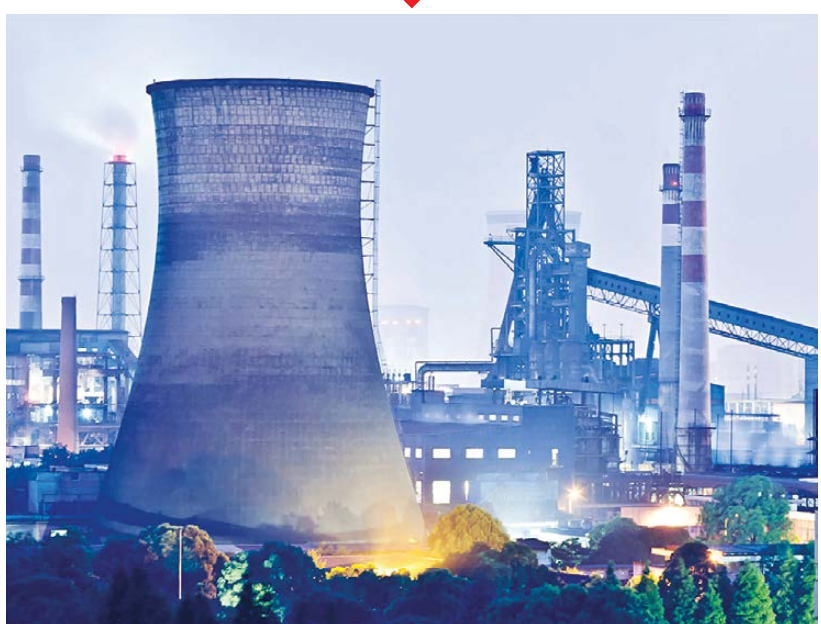

Solar Power in Government Buildings: Solar plants with a combined capacity of 9.8 MW are now operational atop 32 government buildings, helping meet institutional energy needs through clean sources.

Biogas Projects: To address irrigation and power shortages, biogas plants with a combined capacity of 49.8 MW have been developed in Kurukshetra, Kaithal, Fatehabad, and Jind. Many of these are already generating electricity.

Village-Level Solar Access: About 4,500 Manohar Jyoti solar home systems—each including LED bulbs, fans, and batteries—have been distributed to rural households. Additionally, solar lighting systems have been installed in 5,024 Anganwadi centres, enhancing energy access and safety in rural communities.

Haryana's decade-long journey on the road to power sector reforms demonstrates a successful model of inclusive growth, sustainability, and technological innovation. With continued investment in renewable energy, smart infrastructure, and consumer-friendly policies, the state is not just powering homes and farms; it is lighting the path to a cleaner and more equitable energy future.

Haryana has electrified millions of homes, slashed power losses, embraced solar and biomass, and empowered farmers–all while delivering affordable, reliable, and green energy to homes and villages across the state

FROM WIRES TO WATTS

- **Consumer Base Growth:** Electricity consumers in Haryana surged from 54.91 lakh in 2014-15 to 83.18 lakh by 2025, with subsidised power for low-income households.
- **Clean Energy Push:** Over 1.8 million metric tonnes of paddy straw-based biomass pellets co-fired with coal, reducing pollution and creating rural income.
- **Massive Infrastructure Expansion:** 76 sub-stations, 2,800 km of new transmission lines, and over ₹11,000 crore invested to boost grid reliability–now at 99.6% availability.
- **Farmer-First & Rural Schemes:** Free transformer replacements, subsidised solar pumps, and a load enhancement scheme provide energy security and cost relief to farmers.
- **Renewables & Rural Access:** 430-MW solar plants installed,1.6 lakh solar pumps deployed, biogas projects active, and 5,024 Anganwadi centres powered by solar lighting.
