HEALTH GETS A SHOT OF CARE

Building a healthier future

A decade of transformation puts Haryana on the path to universal, tech-driven, and patient-centered healthcare

Healthcare in Haryana is undergoing a quiet revolution. What was once a patchwork of limited facilities and uneven access is steadily transforming into an extensive network of hospitals, clinics, and digital services that make quality healthcare a right, rather than a privilege. From free dialysis and transplants to upgrade hospitals and doorstep disease control, the government's latest initiatives are bringing accessibility, hope, and dignity to millions across the state.

EXPANDING ACCESS AND FINANCIAL SUPPORT

The state has made rapid progress in improving healthcare accessibility, affordability, and infrastructure. To provide financial relief to cancer patients, those in advanced stages (III and IV) with an annual family income below ₹3 lakh, now receive monthly assistance of ₹3,000.

Under the Mukhyamantri Muft Ilaj Yojana, patients are entitled to free kidney, liver, and bone marrow transplants worth up to ₹3 lakh. Since the launch of free dialysis services in all district hospitals and medical colleges on October 17, 2024, more than 1.29 lakh sessions have been conducted up to Sep 2025.

STRENGTHENING HEALTHCARE INFRASTRUCTURE

Between October 2014 and March 2025, 244 new healthcare buildings—including sub-centres, primary health centres (PHCs), community health centres (CHCs), and civil hospitals—were constructed. During the COVID-pandemic, two temporary 500-bed hospitals were set up to meet emergency needs.

Thirteen civil hospitals have been upgraded to 100–200-bed facilities, while Ambala City Civil Hospital now operates with 300 beds.
The Atal Cancer Care Centre in Ambala Cantt, inaugurated in May 2022, provides comprehensive oncology services.

The healthcare network now covers 74 civil hospitals, 122 CHCs, 530 PHCs, and 2,736 sub-health centres. Reflecting the government's commitment to public health, the state's per capita health expenditure rose sharply from ₹1,043 in 2014–15 to ₹3,391 in 2024–25.

FOCUS ON PREVENTIVE AND COMMUNITY HEALTH

Haryana continues to forge ahead on the road to healthcare reforms with a strong focus on prevention, technology, and inclusivity. Between January and Oct 2025, 31.10 lakh malaria tests were conducted, and 3.62 crore households were inspected to check and control mosquito breeding. Since June 2025, about 800 domestic surveillance checkers have been deployed in all districts for continuous vector control.

Under the Pradhan Mantri TB Mukt Bharat Abhiyan, Haryana aims to become TB-free by December 2025, with 1855 gram panchayats already declared TB-free by mid-2024.

The Nirogi Haryana initiative, launched in 2022, provides free comprehensive health screening every two years for 1.59 crore members of Antyodaya families. Up to 10 December, 2025, 97.37 lakh beneficiaries had undergone screening, resulting in 5.64 crore free laboratory tests. Large-scale screening has also been conducted in Anganwadi centres, schools, and industrial sites, identifying about 12 lakh persons with various health conditions who are now receiving treatment.
