Haryana's healthcare transformation blends innovation, inclusivity and infrastructure. With free treatment, digital health records and disease-control drives, the state is turning quality healthcare into a right, not a privilege

MATERNAL AND SPECIALISED CARE

Maternal health remains a key priority. Pregnant women receive free ambulance transport to hospitals under state maternal care programmes. Hospitals across Haryana are adopting National Quality Assurance Standards (NQAS), with Panchkula Civil Hospital becoming the first in India to receive national certification, followed by similar facilities in Faridabad, Kurukshetra, and Sonipat. With round-the-clock delivery services, the rate of institutional deliveries has risen to 98.4%.

The state also offers free testing and treatment for Hepatitis B and C, along with vaccination for high-risk groups — a programme that earned Haryana national award for excellence in comprehensive service delivery during 2021–22.

PUBLIC-PRIVATE PARTNERSHIPS AND SPECIALISED DIAGNOSTICS

Through Public–Private Partnership (PPP) arrangements, the state is expanding advanced diagnostic services such as CT scans, MRI, haemodialysis, and Cath lab facilities. Currently, CT scan services are available in 17 district hospitals, MRI in five, haemodialysis in 22, and cardiology care—including Cath labs and cardiac care units—in four centres. Plans are underway to extend these facilities to every district.

Haryana has also become the first state in north India to offer Single Donor Platelets (SDP) free of cost to dengue patients in government hospitals. Under the Essential Drug List (EDL), 574 medicines, 263 consumable items, 53 COVID-related products, and 171 dental materials are made available free of cost at public health institutions.

WEALTH OF HEALTH

- 58 Mobile Medical Units provide healthcare at people's doorsteps.
- Under the Anemia Mukt Bharat initiative, the state ranked fourth.
- E-Sanjeevani OPD services are available 24x7.
- The monthly honorarium for ASHAs has been increased to `6,100.
- There are 439 New-born Care Corners.
- With round-the-clock delivery services, the rate of institutional deliveries has risen to 98.8%.

DIGITAL TRANSFORMATION IN HEALTHCARE

Digital innovation has been central to Haryana's health reforms. The e-Upchar digital healthcare platform, launched in 2014, has transformed hospital operations by digitising patient records and enabling seamless access to services. So far, over 11.33 crore outpatients and 54 lakh inpatients have benefited. The platform allows online registration, access to lab reports, and reduced waiting times in outpatient departments, significantly improving the patient experience.

TOWARDS A HEALTHIER, INCLUSIVE FUTURE

Haryana's healthcare transformation demonstrates a holistic approach—combining robust infrastructure, preventive care, digital innovation, and social welfare. With ambitious programmes such as Nirogi Haryana, TB Mukt Haryana, and Mukhyamantri Muft Ilaj Yojana, the state is steadily building a model of inclusive and sustainable healthcare. The integration of modern medical technology, strong disease control measures, and financial protection for vulnerable families ensures that healthcare in Haryana does not just expand the reach but also improves in quality. The state's efforts reflect a broader vision: to make every citizen's right to health both tangible, dignified and realistic.
