Display of NAGASTRA - 3 (MRPKS) to Hon'ble Prime Minister at Solar Defence and Aerospace Limited

EVERY LINE OF DEFENCE - SECURED

Solar Group of Industries ventured into the Defence and Aerospace sector in 2010 and has since established one of the largest and most modern ammunition and defence systems development and manufacturing facilities in the private sector. The Group has successfully developed a wide range of munitions and systems including grenades, mines, warheads, rockets, air bombs, and related components for the Indian Armed Forces, offering viable import substitutes and contributing meaningfully to the national mission of Atmanirbharta in the critical defence domain. Our achievements in Defence Sector in the last decade are listed in attached Appendix for your kind perusal. Solar Group has received widespread recognition and encouragement, further motivating the organisation to pursue indigenous solutions that reduce external dependence and strengthen India's defence capabilities.

Recognizing the global shift toward Unmanned Aerial Systems (UAS) in modern warfare, Solar Industries has embarked on the design, development, and manufacture of Medium Altitude Long Endurance (MALE) UAVs - a domain requiring advanced expertise and infrastructure not widely available within the country. To this end, Solar Defence and Aerospace Limited (SDAL) has created comprehensive in-house capabilities supported by collaborations and technology tie-ups.

To support these initiatives, SDAL has established a dedicated design and development team for composites, avionics, control, and guidance systems, along with operational composite manufacturing facilities using advanced carbon-fibre materials and In-house development of key payloads are underway.

Furthermore, a MoCA-accredited runway, complete with hangars and testing infrastructure, has been commissioned at the SDAL premises to facilitate UAV testing and flight validation. The hangars are equipped with Ground Control assembly, integration and manufacturing, Engine assembly & testing , MRO services.

A significant milestone was achieved in Mar 25 with the signing of a Tripartite License-Cum-Technology Transfer Agreement between NSIL Bengaluru, IN-SPACe Ahmedabad, and SDAL Nagpur for the manufacture of ISRO's MiniSAR: X-Band Airborne SAR systems. Additionally, SDAL entered into a joint collaboration with CSIR-NAL, Bangalore for R&D, manufacturing, and commercialization of 150 kg category Loitering Munition UAVs—where SDAL was the only firm qualified under the RFP.
