# Nagastra

Engineered for performance.
Trusted to Safeguard the Nation.

With all the infrastructure facilities and the support systems in place Solar Industries is confident of fielding a fully indigenous prototype of the MALE UAS for User trials within 2 years of issue of RFP.

Complementing this aerospace. initiative, Solar Robotics & AI Unit is pioneering AI-driven solutions for the defence sector. This includes the development of humanoid robots, autonomous robot dogs, and advanced UAS including MALE and HALE class equipped with AI-powered systems for surveillance, logistics, and tactical missions. The initiative integrates Industry 5.0 principles—combining AI, digital twins, and autonomous manufacturing—to create India's first fully integrated production ecosystem for next-generation intelligent systems. Our plans for completing the infrastructure for this exclusive pathbreaking facility are already finalized and we plan to complete the infrastructure within approx 10 months. A team of 7 Indian scientists have relocated back to India from Germany and France and joined the Solar Group, bringing with them a rich working experience of 20 years in the critical field of AI & robotics. This return of our expatriates reaffirms their confidence in the leadership and potential their country has in the World today. Our new facility will have the capacity to roll out upto 1,000 Robots & 10,000 UAS annually.

Solar Group remains steadfast in its commitment to national security and technological self-reliance. By leveraging indigenous innovation, strategic collaborations, and cutting-edge manufacturing, the Group aims to position India as a global hub for advanced munitions, unmanned systems, and intelligent robotics—contributing decisively to the vision of a self-reliant and future-ready Defence ecosystem.
