# India's Youngest Innovators: How 16 year old Akshaj Gupta is Redefining Tech for Good

Akshaj Gupta

At just 16, Akshaj Gupta is helping build technology that can save lives, power communities, and inspire young adults to shoot for the stars. He's a class 11 student at Vasant Valley School, New Delhi, who is adeptly establishing himself as one of India's youngest contributors to socially driven engineering.

Akshaj is playing a key technical role at **eNext ICU**, a telemedicine company working to close India's critical care gap. The platform connects ICUs in smaller towns and remote regions across the Indian peninsula with experienced specialists based in Gurugram, enabling real-time patient monitoring and decision-making. Akshaj's ongoing contributions cover the integration of core software systems that make these remote ICU connections reliable, secure, and scalable, a step towards helping ensure that geography is no longer a barrier to accessing lifesaving care.

**Akshaj's feats demonstrate how aspiring scientists and engineers can go beyond classrooms and competitions and extend their energy and skills to teams creating solutions with real-world impact.**

Akshaj is also a junior team member at **Ripple Healthcare** as it develops the Raksha Smartwatch, a wearable fall-detection device designed to improve safety and independence for senior citizens. Joining immediately after Class 10, he was roped in for tasks on **UX-focused coding**, working closely with designers to shape a product that caters to elderly users battling neurological conditions such as Parkinson's and dementia.

Beyond healthcare, Akshaj has subscribed to India's vision on clean energy. He is associated with **Necon**, an engineering firm developing next-generation **vertical axis wind turbines**. Akshaj supports the refinement of ultra-light, super-efficient turbine designs capable of operating at very low wind speeds. Such advanced technology is central to Necon's vision of hybrid renewable energy hubs combining solar and wind systems.

Earlier this year, Akshaj represented **Vasant Valley School and India at RoboCup 2025 in Salvador, Brazil**, competing in the *Junior Soccer Lightweight* category. It is a remarkable achievement given that he qualified as a Class 10 student.

Akshaj's feats demonstrate how aspiring scientists and engineers can go beyond classrooms and competitions and extend their energy and skills to teams creating solutions with real-world impact. He is an inspiring example for students across the country, showing that STEM, when underlined by purpose, empathy, and initiative, can be a powerful force for public good even at such a young age.
