ZEE LABORATORIES

THREE DECADES IN PHARMACEUTICAL MANUFACTURING

In pharmaceutical manufacturing, outcomes depend on process. Every decision, from sourcing to compliance, carries consequences for patients who may never know the name of the company behind their medicines. Zee Laboratories has been shaped by this understanding since its founding in 1993.

Led by Chairman and Managing Director Rajeev Mukul, the Karnal based company has grown over three decades into a pharmaceutical manufacturer supplying both domestic and international markets. In conversation with India Today's Monita Sharma, Rajeev Mukul and his son, Rohan Mukul, speak about the thinking that guided the company's growth and the responsibility that comes with producing medicines at scale.

"When we started, the aim was simple," Rajeev says. "To make quality medicines in India and ensure they reached people across the country and beyond." Over time, that focus translated into manufacturing infrastructure, regulatory compliance, and a carefully-planned expansion.

Today, Zee Laboratories operates eight manufacturing units, six pharmaceutical plants and two
