Beyond the hospitals, Dr Bali remains deeply connected to society. An avid reader with a love for Urdu poetry and community work, he believes medicine must go beyond procedures. It must serve people. Through the HEART Foundation, he leads awareness drives, walkathons and vaccination support for the underprivileged.

Dr. Bali's Lifetime Achievements

- Chairman, Cardiac Sciences – Livasa Group of Hospitals.
- Chairman, National Interventional Council (CSI).
- Global pioneer in stenting for Takayasu's Arteritis.
- Discovered Bali's Anomaly (rare coronary variant named after him).
- 125+ scientific publications in top international journals.
- Mentor to generations of cardiologists.

this spirit of service. His wife Neeru contributes to education, and his daughter is pursuing her PhD in the United States.

Despite global recognition, Dr Bali continues to choose purpose over prestige. From decades of emergency experience, he has identified the real culprits behind sudden collapse in the young: heart attacks; cardiomyopathies; electrical disorders called channelopathies; congenital coronary anomalies, including the rare "Bali's Anomaly," named after him; unsupervised use of even routine acidity or allergy medicines, and substance abuse, particularly cocaine.

Prevention, he insists, must become the national priority. "Anyone joining a gym must undergo a medical evaluation. CPR training should be mandatory in gyms. And every gym should have at least an MBBS doctor and a nutritionist".

With compassion at his core, Dr Bali often spends time connecting with anxious families and frightened patients. Many remember him not only as the doctor who saved a life, but as the voice of calm that brought strength in their darkest moment.

For thousands of families, Dr Bali is not just a Cardiologist. He is a lifeline, a leader, and a changemaker shaping the future of heart care in India.

Dr. Bali's Guidance for Every Indian

- Get regular heart evaluations – start young.
- Avoid unsupervised medications.
- Ensure gyms have medical and CPR support.
- Listen to symptoms.
- Protect mental health – manage stress, stay active.
