DR MAJID AHMED TALIKOTI

Leading Surgical Oncologist Transforming Cancer Care Across India

Some people seem to live several lives in a single day. Dr Majid Ahmed Talikoti is one of them. He begins his mornings operating in New Delhi at Moolchand Hospital or Batra Hospital & Research Centre, where he serves as Director of Surgical Oncology. He also consults at Northern Railway Central Hospital, and every month he travels to Florence Hospital in Srinagar and Sunrise Hospital in Gulbarga to ensure patients in smaller cities get the same level of cancer care as those in metros.

At the centre of his world stands the institution he built: the fully operational 600-bedded Medicant Hospital & Research Centre in Bokaro, where he is the Founding Chairman & Managing Director. For thousands across Jharkhand, Bihar, Odisha, and Chhattisgarh, Medicant has transformed cancer care from something distant and unaffordable into something reachable, humane, and dignified.

He works across these centres not for prestige, but because he believes one truth too deeply to compromise: cancer care should never depend on geography or income.

Often introduced as "Asia's Top Cancer Surgeon," Dr Talikoti has performed more than 20,000 major cancer surgeries, an enormous number by any standard. But what defines him is not how much he works. It's why he works.

Dr Talikoti grew up in a small village named, Shorapur in Karnataka. He credits his father Khalid Ahmed for his success today. He completed his MBBS and MS from RGUHS, specialised in Surgical Oncology at IRCH, AIIMS, and trained further at the National Cancer Centre in Japan - one of Asia's top cancer institutes.

But his true orientation toward oncology came from moments of emotional clarity.

"During my medical college days, I met cancer patients who already believed life was over. That hopelessness… it stayed with me. I knew I had to be here."

Unlike many specialists who choose fields based on academic interest, Dr Talikoti chose oncology because he couldn't walk away. The stories, the fear, the isolation patients felt, they grounded him in a mission larger than any career plan.

Today, his surgeries span complex head-and-neck reconstructions, breast oncoplasty, gastrointestinal cancers, soft tissue sarcomas, thoracic resections, gynecologic oncology and more.
