Empowering Minds, Nurturing Leaders

Accurate Group's 19-Year Legacy

Accurate Institute of Management & Technology, situated in Greater Noida under the Accurate Group of Institutions, holds a formidable position in the realm of management education in India, boasting a 19-year legacy. Spearheaded by Ms. Poonam Sharma, the institution's PGDM program transcends the boundaries of traditional education, immersing students in a dynamic and competitive business environment.

The two-year, full-time AICTE-approved PGDM program is meticulously designed to impart a comprehensive and contemporary management education. Emphasizing practical learning and a rigorous curriculum, it equips students with the necessary skills to thrive in the fast-paced business world. Accurate's commitment to quality education is manifested through its Outcome-Based Education (OBE) approach, ensuring students graduate with industry-relevant knowledge and competencies, enhancing their employability and adaptability.

Supplementing the core PGDM curriculum, Accurate Institute offers a variety of value-added certification courses from IBM and Microsoft. These specialised courses cover topics such as business analytics, digital marketing, cybersecurity, artificial intelligence, machine learning, and entrepreneurship, enhancing students' profiles and making them stand out in the competitive job market.

The institution's commitment to global exposure is evident in its Global Immersion Program, which provides students with insights into international business practices and the nuances of the global market. The collaboration with a renowned Swiss institution for the Swiss Immersion Program further enriches students' international perspective on business management.

Through its Corporate Interface & Outreach Program, Accurate Institute cultivates robust connections with the corporate world, enabling students to benefit from interactions with industry leaders, entrepreneurs, and experts.

Accurate Institute's focus extends beyond academic excellence, preparing students for life beyond the classroom through its Placement Enhancement Program. The impressive placement record, with nearly 100% placement in reputed organisations, underscores the institute's dedication to producing industry-ready professionals.

The institute's strong alumni network stands as a testament to its success, with alumni holding key positions in top companies and contributing significantly to the business world. The faculty members, accomplished experts in their respective fields, bring extensive industry experience to the classroom, ensuring students receive top-notch education.

Leading the Way in Higher Education

Swadesh Kumar Singh
CEO, GIMS

The United States has revised its tariffs on imports from all countries, including India, disrupting decades of smooth bilateral trade. Indian goods sold in the US market—and products manufactured in India for US companies—now face reduced margins and weakened price competitiveness. With shrinking price advantages, consumer preferences may shift, leading to lower orders, reduced economies of scale, and significant pressure on India's small and medium enterprises (SMEs), many of which rely heavily on overseas business.

To understand the larger dynamics, it is important to consider the nature of global trade. The US holds a distinct advantage in modern defence and high-technology equipment. Countries seeking to maintain strategic superiority often purchase these systems in USD, increasing global demand for the dollar. One way nations acquire USD is by expanding trade with the US, which creates a structural dependency. Higher US tariffs widen trade deficits, forcing adjustments at the lowest levels of the supply chain and immediately impacting per capita incomes.

This trade conflict can be viewed from two perspectives. As a sovereign nation, the US has the right to pursue policies that favour its domestic interests. Yet as the world's largest economy and a global leader, it bears responsibility for decisions that influence worldwide stability. The US appears focused on generating additional revenue to reduce debt and invest in development, particularly in research and innovation—areas that offer high returns to GDP.

For India, this moment presents an opportunity to strengthen self-reliance. With abundant resources and a vast domestic market, India can reduce import dependency, promote Made-in-India products, and prioritise technological advancement. Developing niche, futuristic products and expanding trade with emerging economies can further buffer the impact. Additionally, governmental measures such as lowering interest rates can help boost liquidity and stimulate growth.

In essence, this trade war—while challenging—could ultimately serve as a catalyst for India's long-term economic resilience.
