learns patterns, anticipates needs, and alerts retailers before stockouts occur.

THE POWER OF DISTRIBUTION: BRANCHX'S GROWTH ENGINE

BranchX's nationwide scale rests on three leaders: Rajesh Shishodia who transformed Oye Messenger into a large ecosystem powering 100,000+ retailers. Ankur Gupta brings digital distribution and retailer acquisition expertise. Rahul Das specializes in merchant lifecycle management and scalable onboarding. Together, they lead TRAMO, powering merchant onboarding, KYC engines, distribution networks, and field operations at scale, ensuring the Xenie Cube reaches every corner of India's fragmented retail network.

WHAT'S NEXT: THE FUTURE OF KIRANAS

Sajid believes the future will not be a fight between e-commerce and kiranas but a convergence. "Kiranas will digitize rapidly under competitive pressure. A new generation of AI-enabled modern kiranas will emerge visually upgraded, deeply automated, and seamlessly integrated with supply chain intelligence."

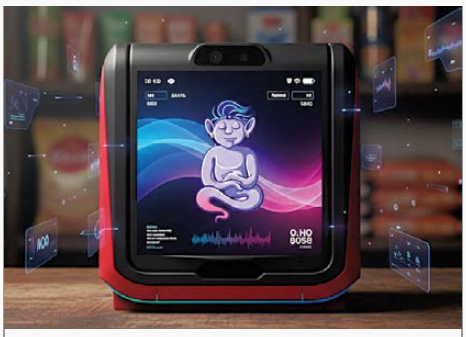

These stores will become micro-fulfillment engines for larger e-commerce networks. The Xenie Cube becomes the enabler of this evolution.

LEADERSHIP BRINGING ENTERPRISE MEETS STARTUP DNA

BranchX's leadership blends enterprise discipline with startup speed: Rajesh Johnny, the brand architect behind India's biggest retail launches brings mass-market positioning expertise. Sanjay Yadav with TCS and Wipro experience plus startup stints blends enterprise architecture with agility. Spurthi Gowda, the Imcronix co-founder bringing AI engineering rigor.

VETERAN INVESTORS SIGNAL INSTITUTIONAL CONFIDENCE

BranchX is backed by respected leaders: Afzal Modak (GE veteran), S. Madhavan (former Big-4 partner, ICICI Bank Board member), Sindhu Bhaskar (global banker), and Abdul Khaliq (ex-Saudi fund Co-CEO), plus marquee early and late-stage investors. Their belief signals: BranchX is not a startup, it's an emerging institution. This investor confidence is reinforced by strong financial performance with FY 24-25 revenue of 115 Cr projected to rise to 160 Cr in FY25-26 driven

by organic expansion and strategic inorganic growth.

CLOSING INDIA'S ₹300 BILLION RETAIL CREDIT GAP

BranchX is in advanced partnership discussions with Fino Payments Bank, AU Small Finance Bank, and Mswipe. By pairing the Cube with micro-POS devices, BranchX aims to deliver ethical, data-driven supply chain finance to millions of SMEs.

The Xenie Cube creates the data layer consisting of transaction patterns, inventory cycles and customer footfall, transforming invisible retailers into creditworthy borrowers. This isn't just technology; it's financial inclusion architecture.

INDIA'S ALEXA MOMENT—BORN AT THE COUNTER

The Xenie Cube begins at India's 13 million retail counters, its design is backed by patent filings in USA and India that protect the Cube's unified vision-voice AI system and intelligent counter automation framework that will extend across hospitality, logistics, healthcare, governance, and eventually every Indian home.

"India has a chance to build its own intelligent hardware ecosystem and not import one," Sajid reflects. This is India's opportunity to create a globally recognized intelligent device platform, solving uniquely Indian problems at uniquely Indian price points.

A QUIET REVOLUTION AT THE COUNTER

As India Today celebrates 50 years of chronicling transformation, BranchX is quietly igniting the next leap, not in corporate boardrooms but from the counters that keep 1.4 billion Indians moving.

The Xenie Cube is India's counter revolution where the oldest form of Indian commerce meets the newest form of Indian innovation, creating intelligent commerce designed for India's reality, scalable to India's ambition, and accessible at India's price points.

This is how revolutions happen, not with grand announcements, but with quiet installations, one counter at a time, until suddenly, 13 million points of intelligence light up across the nation, and India realizes it built the future while the world wasn't watching.
