INSPIRING JOURNEY OF
MR. SANJAY ARORA

Leading Ado Additives Technologies Ltd. (ATPL) with Integrity

Built on Quality, Driven by Purpose

In India's fast-evolving construction and infrastructure sector—where durability, timelines, and performance define success—only a few companies manage to earn long-term trust. Ado Additives Technologies Ltd. (ATPL) stands among them. With over two decades of experience, a strong Pan-India presence, and an uncompromising commitment to quality, ATPL has emerged as one of the India's most respected manufacturers of construction chemicals. At the heart of this journey lies the vision and perseverance of its founder, Mr. Sanjay Arora, today strengthened by the active involvement of the next generation, Abhinav Arora.

A Vision Born from Industry Gaps

Founded in 2004, ATPL was established at a time when the Indian construction chemicals market was still developing. High-performance construction chemicals were largely imported or supplied by multinational companies—often expensive and not fully suited to Indian climatic conditions or construction practices. Sanjay Arora, a hands-on technocrat with deep exposure to the construction and infrastructure sector, identified this gap early.

He envisioned an Indian company capable of manufacturing world-class construction chemicals locally—products that were technically advanced, cost-effective, and designed specifically for Indian site conditions. This clarity of purpose became the foundation of ATPL, seamlessly aligning technical excellence with the practical realities of Indian construction.

Leadership Rooted in Ground Reality

What truly set Sanjay Arora apart as an entrepreneur was his ground-level approach. Rather than relying solely on boardroom strategies, he spent extensive time on project sites, engaging directly with engineers, contractors, and execution teams. These on-site interactions shaped product development and ensured that solutions delivered consistent results in real-world conditions.

His focus has never been on short-term volumes, but on reliability, repeat performance, and long-term durability. As he often emphasizes, "Construction chemicals may account for only 2–5% of a project's cost, but they determine the strength, durability, and life of the structure. Quality at this stage cannot be compromised." This philosophy continues to define ATPL's identity.

A Trusted Name in Construction Chemicals

Headquartered in New Delhi, with its main manufacturing unit located at Surajpur Industrial Area, Greater Noida (Uttar Pradesh), ATPL today

SANJAY ARORA
Managing Director (Sitting), ATPL

ABHINAV ARORA
Director, ATPL

enjoys a strong Pan-India footprint. The company is ISO 9001, ISO 14001, CE, and BIS certified, reflecting its adherence to international standards in quality management and environmental responsibility.

Backed by a team of qualified and experienced professionals, ATPL has successfully delivered 250+ infrastructure projects across India. Its expertise spans Metro Rail and High-Speed Bullet Train projects, roads and highways, airports, railways, urban development, and power infrastructure—supporting some of the country's most complex construction requirements.

ATPL has been associated with several marquee projects of national importance, including the Delhi Airport Elevated Taxiway, India's first Road Runway project on the Agra–Lucknow Expressway, the world's highest Chenab Railway Bridge in Jammu & Kashmir, the Jewar International Airport Near Greater Noida UP, the NCRTC Delhi Meerut Rapid Transport project, the Mumbai–Vadodara Expressway, and extensive underground works for the Delhi Metro and other major Metro Rail systems. Each project reflects the company's commitment to durability, precision, and long-term performance.

A Comprehensive Product Portfolio

Ado Additives Technologies Ltd. offers a specialised range of construction chemicals, including Admixtures, corrosion inhibitors, curing compounds, mould release agents, waterproofing compounds, bonding agents, microsilica, and segmental glue. All products are manufactured using modern technology and undergo stringent quality control. ATPL's in-house R&D team continuously upgrades formulations to meet the evolving technical and environmental demands of modern construction.

The Next Generation: Mr. Abhinav Arora

As ATPL completes 20 years, its founding vision is further strengthened by the involvement of Abhinav Arora. This is not a conventional generational transition, but a collaborative partnership. While Sanjay Arora continues to guide strategy, product philosophy, and key client relationships, Abhinav focuses on strengthening internal systems, improving quality controls, enhancing technical documentation, and aligning the organization with the expectations of large infrastructure clients.

Together, they represent continuity—where experience meets structured growth, operational discipline, and long-term planning.

Vision for the Future

ATPL vision is to be among India's leading construction chemicals companies and the most preferred choice for customers through excellence in quality and timely delivery. With continuous investment in R&D, a strong focus on sustainable and environment-friendly products, and deep alignment with India's infrastructure ambitions, the company remains well-positioned for the next phase of growth.

Twenty Years of Trust. Two Generations. One Promise: Quality Without Compromise.
