

INFRASTRUCTURE FOR FUTURE: REWORKING INDIA'S NEXT-GEN GRID

INDIA TODAY INFRASTRUCTURE CONCLAVE 2026

"We've attained what we aspired to a few years ago, adding 50 GW of renewables annually. The momentum is strong, and this is not the time to pause or review. We must correct what's going wrong, the grid balancing is critical. Curtailment has been quite heavy"

BHUPINDER SINGH BHALLA
Former Secretary, Ministry of New and Renewable Energy

"Flexible operation is now a core necessity of the power system. We can't expect only one segment, say, thermal generators, to shoulder the entire responsibility of balancing the grid. Every stakeholder must contribute in proportion"

I.C.P. KESHARI
Director General, Association of Power Producers

URBAN INDIA ON THE MOVE

"The vision should be that at any point in the National Capital Region, if a person walks in any direction, he should be able to get to a metro station within a 500m walk"

VIKAS KUMAR
Managing Director, Delhi Metro Rail Corporation

"The blind spot is really our urban governance structure. Our bureaucrats get transferred within 18 months. So, where is the question of a long-term vision? Who is responsible for that?"

PROF. GEETAM TIWARI
IIT Delhi

"A comprehensive city vision should include answers on how people will charge electric vehicles, how buses will charge, what this means for our discoms and power planning"

AKSHIMA GHATE
Director, Rocky Mountain Institute, India
