supported by reliable energy supply and efficient logistics. This convergence allows private investment to build upon public capacity rather than compensate for its absence. As national infrastructure deepens, the economic life of private assets lengthens, returns become more stable and expansion decisions gain predictability.

The Next Growth Phase

Aviation and regional connectivity form a critical part of this cycle. Policy focus on expanding routes and upgrading airport infrastructure will increase passenger throughput and cargo movement, transforming airports into commercial ecosystems rather than transit points alone. Retail, logistics, tourism and regional enterprise clusters are emerging around these nodes, extending economic impact well beyond terminals.

Energy forms the second pillar. Reliable power remains foundational to manufacturing, services and digital growth. Policy emphasis on clean energy, grid resilience and diversified fuel sources strengthens energy security while advancing sustainability goals. Investments across conventional power, renewables, transmission and downstream energy systems now operate within a framework that rewards long-term capacity creation.

Digital infrastructure is emerging as the third pillar. Incentives for data centres and cloud services reflect the recognition of data as critical national infrastructure. Regulatory clarity and supportive policy provisions improve project viability, accelerating the development of hyperscale facilities that underpin government platforms, enterprise digitisation and emerging technologies. As data consumption rises, so does the importance of integrated energy and logistics systems that ensure resilience and efficiency.

Urban Finance, Logistics Framework

The government's push to strengthen municipal finance, including incentives for large municipal bond issuances, signals a clear understanding that cities are central to growth. Stronger urban balance sheets enable sustained investment in transport, utilities and public services, creating stable platforms for private participation. For infrastructure operators, financially empowered cities translate into clearer project pipelines and more durable partnerships.

Logistics tie these elements together. Efficient freight corridors, ports and multimodal networks reduce costs, improve export competitiveness and support industrial clusters across regions. As logistics efficiency improves, India's integration with global supply chains deepens.

Together, these measures reinforce growth across ports, airports, energy, logistics and data centres, aligning closely with the scale and scope of India's leading infrastructure and energy investors. For the Adani Group, whose portfolio spans these very sectors, this alignment is structural rather than incidental. The broader economic implications are significant, lower logistics costs enhance export competitiveness, improved connectivity expands labour mobility and stable power and digital networks attract long-term investment. Over time, these gains compound, raising productivity and widening participation in growth.

India's infrastructure strategy today reflects a clear understanding: scale is essential. To sustain high growth, absorb a growing workforce and compete globally; the country must build large, integrated systems with speed and discipline. The convergence of public policy and private capacity now underway suggests that India's infrastructure story is no longer just about assets created, but about a growth model coming fully into alignment.

Key takeaways for the Adani Group

Infrastructure

- ₹12.2 lakh crore capex across infrastructure, ports, power, airports & logistics

IMPACT: Economic growth drivers

Aviation

- 120 new routes under UDAN regional air connectivity
- Around 4 crore incremental passengers over 10 years via regional air connectivity

IMPACT: Growth in air traffic

Data Centres

- 15% safe-harbour margin for transfer pricing of data-centre services
- Tax holiday to attract global cloud and hyperscale data-centre investments until 2047

IMPACT: Boosting India's cloud hub ambitions

Corporate Bond Market

- Incentive of ₹100 crore for single bond issuances exceeding ₹1,000 crore

IMPACT: Empowerment states and urban local bodies

Energy, Power & Utilities

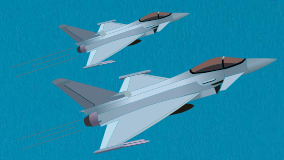

- ₹25,000 crore Maritime Development Fund
- ₹20,000 crore Nuclear Energy Mission
- 500 GW Non-fossil capacity target by 2030

IMPACT: Strengthening security and scale

Defence

- Budget increased to ₹7.85 lakh crore from ₹6.81 lakh crore in FY26
- Capital outlay for modernisation pegged at ₹2.19 lakh crore

IMPACT: Aatmanirbhar Bharat
