GREEN ENERGY POWERHOUSE

LEADING INDIA'S TRANSITION TO A SUSTAINABLE ECONOMY

One of the most defining elements of Andhra Pradesh's growth story is its emergence as a major renewable energy hub.

With abundant solar irradiation, strong coastal wind corridors and large tracts of available land, the state is uniquely positioned to drive India's clean energy transition. Today, Andhra Pradesh has over 20 GW of installed power capacity, with nearly 40 percent generated from renewable sources, making it one of the country's leading green energy producers.

SCALING RENEWABLE INFRASTRUCTURE

The government has launched large scale solar, wind and hybrid energy projects across districts such as Kurnool, Anantapur, and Kadapa, regions known for high solar potential. Mega renewable parks, battery storage facilities and green hydrogen projects are rapidly transforming the state's energy landscape.

Among the most significant investments is a proposed green hydrogen and green ammonia complex in Kakinada and Visakhapatnam, with an estimated investment of ₹13,000 crore and a production capacity of nearly 1 million tonnes per annum. The project is expected to generate thousands of jobs while positioning Andhra Pradesh as a major supplier of clean fuels for global markets.

ENERGY SECURITY FOR INDUSTRY

For industries, energy reliability is as critical as cost competitiveness. Andhra Pradesh has strategically positioned itself as a power surplus state, ensuring uninterrupted electricity supply for manufacturing, technology and infrastructure projects.

This renewable capacity not only supports climate commitments but also enhances the state's attractiveness to companies seeking sustainable production ecosystems. Green energy investments are also closely tied to the state's electric vehicle manufacturing ecosystem, battery production clusters and industrial parks that focus on future technologies.

Through a combination of renewable generation, green fuels and energy storage, Andhra Pradesh is steadily building one of India's most robust clean energy ecosystems.

Andhra Pradesh has set definitive renewable energy targets: 78.50 GW solar, 35 GW wind, 22 GW pumped storage, 25 GWh battery storage, and 1.50 million tons of green hydrogen annually. The state aims to mobilise 10 lakh crore investments, generate 7.50 lakh jobs by 2029-30, and achieve net-zero emissions by 2047. An integrated governance framework underpins these objectives, combining policy incentives, skill development, and public-private partnerships. This framework accelerates clean technology deployment, strengthens energy security, and drives sustainable economic growth. With these strategies, Andhra Pradesh is advancing at the speed of doing business, ensuring rapid execution and measurable progress toward its renewable energy and sustainability goals."
