

Gujarat becomes the SEMICONDUCTOR HUB OF INDIA

When the Vikram lander of the Chandrayaan 3 Mission touched down on the Moon, it made precise real time decisions independently. Powered by Indian technology and artificial intelligence, it identified a safe landing site and executed a complex descent. At the core of this achievement were semiconductor chips performing millions of calculations every second. These chips store, process and transmit information through millions and often billions of transistors that regulate electrical signals. From smartphones and electric vehicles to satellites and defence systems such as Akashteer, semiconductors power the modern world and sustain today's connected life.

India Semiconductor Mission

Recognising their strategic importance, Hon'ble Prime Minister Shri Narendra Modi launched the India Semiconductor Mission with an incentive package of ₹76,000 crore to strengthen fabrication and display capabilities and reduce import dependence.

The Union Budget 2026-27 announced India Semiconductor Mission 2.0 with an allocation of ₹1000 crore to achieve the vision of Atmanirbhar Bharat and Viksit Bharat @2047 to expand domestic capacity, deepen industry participation and build a self reliant ecosystem.

Gujarat Leading India's Chip Manufacturing Journey

Gujarat moved early with the Gujarat Semiconductor Policy 2022 to 27, offering fiscal incentives, land allotment, faster approvals and assured access to power, water and gas.

75% National Investment

Gujarat holds ₹1.24 lakh crore in investments, the highest in India.

40% Approved Capacity

The state hosts nearly half of India's total approved semiconductor manufacturing capacity.

Record Delivery in 900 Days

Micron's Sanand plant moved from MoU to commercial production in record time.

Backed by major ports, a long coastline and connectivity through the Delhi Mumbai Industrial Corridor, along with strong road, rail and airport networks, the state provides robust industrial infrastructure. Transparent subsidy mechanisms and fast track clearances strengthened investor confidence.

Gujarat has secured nearly 40 percent of India's approved semiconductor manufacturing capacity, attracting investments of around ₹1.24 lakh crore, accounting for over 75 percent of the national total.

Institutional Anchoring and Ecosystem Support

In Gujarat, GSEM (Gujarat State Electronics Mission) serves as the state's nodal agency to attract and facilitate investments, offering single-window support for land, utilities, environmental clearances, and approvals. It plays a key role in structuring projects, aligning incentives with Government of India schemes, strengthening the ecosystem through supplier mapping and vendor development, and coordinating across departments to fast-track infrastructure and approvals within the state.

The Department of Science & Technology (DST), Government of Gujarat, provides the policy and administrative backbone by guiding execution, coordinating with central ministries and agencies, and linking R&D and skill development initiatives with academia and training institutions.

Building India's Semiconductor Workforce

Under the leadership of Chief Minister Bhupendra Patel, models such as SAMARTH, IDSPS, and ChipIN have been implemented to make over 50,000 students from 118 engineering colleges in the state "chip-ready." At IIT Gandhinagar, under the ₹194.21 crore SAMARTH project, around 2,600 specialists are currently undergoing training, while 3,750

> The Micron plant strengthens our semiconductor ecosystem and reflects Gujarat's transition toward becoming a Global Capability Center in AI, aligned with 'Viksit Bharat @2047' and 'Make in India, Made for the World'.
