Semiconductors bridge the Industrial and AI revolutions. With Semiconductor Mission 2.0, rising production will unlock new opportunities for domestic industries."

— Hon'ble Prime Minister Shri Narendra Modi

design engineers are being trained under ChipIN. Meanwhile, at PDEU, a cleanroom training facility established in collaboration with Micron ensures that students are equipped to work directly in advanced semiconductor manufacturing units.

India's Chip Ambitions

Micron's ATMP plant in Sanand was inaugurated by Prime Minister Shri Narendra Modi. The plant manufactures SSD storage devices along with DRAM and NAND products, employs 2,000 people and is expected to expand to 5,000 direct jobs, including opportunities for Divyang citizens.

The MoU was signed in June 2023, Bhoomi Poojan took place in September 2023 and commercial production began in February 2026, completing the journey in just 900 days.

Chief Minister Shri Bhupendra Patel termed the inauguration a milestone in Gujarat's transition from textiles, diamonds and pharmaceuticals to emerging sectors such as artificial intelligence and semiconductors. Deputy Chief Minister Shri Harsh Sanghavi reaffirmed the state's commitment to becoming a preferred global semiconductor destination. Union Minister Shri Ashwini Vaishnaw described the development as historic, noting that more than 315 universities are engaged in chip design.

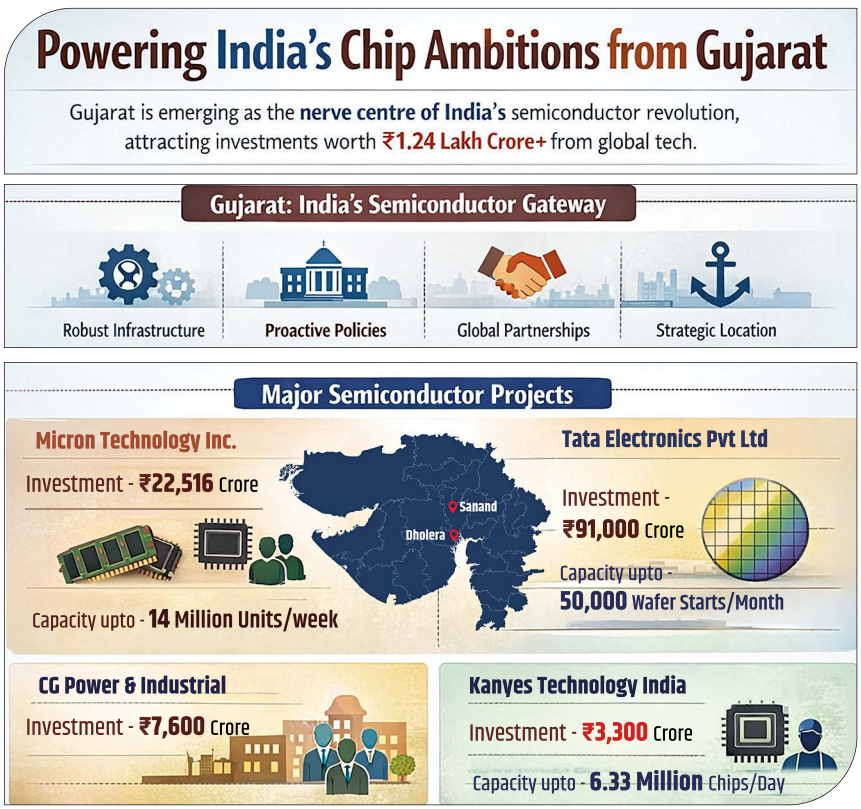

A six decade semiconductor dream has become reality. From design to manufacturing, we are building a complete ecosystem, with over 315 universities now designing chips.

Union Minister for Electronics and IT
Shri Ashwini Vaishnaw

Sanand Semiconductor Plant

The Sanand plant houses one of the world's largest advanced cleanrooms, spread across five lakh square feet in Phase 1. It required iron equivalent to three and a half Eiffel Towers and concrete equal to 100 Olympic sized swimming pools.

Maintaining air purity cleaner than an operation theatre, the facility uses vertically flowing filtered air and a raised floor system to ensure uninterrupted cooling, power and data systems.

Gujarat Hosted the 3rd Edition of Semiconnect Conference 2026

The Government of Gujarat hosted the third edition of the Gujarat Semiconnect Conference 2026 on 1 March 2026 at Mahatma Mandir, Gandhinagar. Convened by the Department of Science and Technology and Gujarat State Electronics Mission, it was inaugurated by Chief Minister Shri Bhupendra Patel along with Union Minister Shri Ashwini Vaishnaw, Deputy Chief Minister Shri Harsh Sanghavi and Minister Shri Arjun Modhwadia.

We are committed to establishing Gujarat as a preferred global destination for semiconductor manufacturing and as the gateway to India's silicon industry through strategic partnerships.

Hon'ble Deputy Chief Minister of Gujarat
Shri Harsh Sanghavi

Themed Gujarat India's Gateway to Silicon, the conference brought together global semiconductor leaders to discuss next generation research, manufacturing expansion, export readiness for Dholera and Sanand, financing through GIFT International Financial Services Centre and workforce development.

The conference reinforced Gujarat's position at the centre of India's semiconductor transformation.
