LIVE DEMO ROBO SOLDIERS & CYBER HOUNDS

THE ROBO REVOLUTION

> **We do not have competition within India. Our competition is with the US and China. If firms like ours get the right kind of support, India could be the next superpower in robotics and AI**
>
> **- Mukesh Bangar**
> *Founder, CTO & CEO, Muks Robotics*

The India Today Conclave witnessed the live demonstration of an AI-powered humanoid robot—Spaceo, built from scratch by Pune-based Muks Robotics using materials totally sourced from India—and two cyber hounds named Guardeo. The startup founder, Mukesh Bangar, a certified dentist who had a penchant for assembling electronic products even as a child and later developed interest in neural networks and AI, made a career pivot in 2020 to launch the robotics firm. He shared his incredible journey as an innovator, educating himself on robotics by watching videos on YouTube, and how his innovations promise to change the technological landscape. ■

KEY TAKEAWAYS

- **Every new technology creates the fear of large-scale cuts in jobs. But AI would create new jobs**
- **Spaceo Prime, a humanoid robot, comes with advanced AI technology intended for space missions. Pro model is for industrial use**
- **While robots made in India will be cheaper than those made in the US, China will still have an edge on the cost front. India's strength will be in developing software**
