Key Challenges

- **More than 91% automotive shop floor roles remain male-held nationally**
- **Job amenities, recruitment outreach, and role design rarely consider factors that shape women's decision to accept a job**
- **Gaps in infrastructure to support women with facilities such as creches. Most firms assess it primarily through a statutory compliance lens**
- **Women have fewer opportunities to gain exposure to technical roles, night shifts, and high-visibility assignments that support promotion**
