Presidency University: Transforming the Future of Business Education

At a time when the business world is being reshaped by technology, globalisation and changing industry needs, Presidency University, Bengaluru is building a distinctive approach to management education. Its focus on industry exposure, internationalisation and emerging technologies is shaping a learning environment designed to prepare students for the complexities of the modern business world.

Dr. Nissar Ahmed
Chancellor, Presidency University
Chairman, Presidency Group of Institutions

As a university that focuses on student-centred learning, Presidency University, Bengaluru, has always been driven by this deep sense of purpose towards educating the youth through generations. In the 50th year of the Presidency Group of Institutions and the decennial year of Presidency University, we have been leading the University towards evolving into an innovative educational institution. At the University, curiosity, creativity and the joy of working with young minds are of prime importance to us. This spirit flows seamlessly across the schools of Engineering, Management, Law, Design, Liberal Arts and Humanities, Media Studies, Commerce, and Allied and Healthcare Professions. Presidency's graduate and postgraduate professional programmes offer an experience to learners that is not only intensive but also offers a rich research experience. With a world of diverse students on campus, learners form a community and embrace the value of pursuing knowledge from their ecosystem. Driven by this pursuit, the entire community at Presidency University believes that their work impacts society and the world at large.

A campus that transcends boundaries
From the lush green manicured lawns to the row of trees, the towering auditorium, and the easily accessible academic zones and buildings, Presidency University, Bengaluru, has been an oasis, a place where learning is an enjoyable experience. Curated for learner-centric spaces and innovation and invention, Presidency University has always left in every visitor, learner, and parent on the campus an impression of wonder. For a student who enters the campus, the next 4 to 5 years of his journey create an energy within him, in an ecosystem that is buzzing with ideas, openness of faculty, curiosity that is kindled by his discussions and deliberations with his peers and teachers, and the prodding to excel in the discipline of his choice out of the 11 schools that stand tall. The campus has been designed for an experience that buzzes with every possible emotion that a student can experience.

About Presidency
Presidency University is a **NAAC 'A'**-accredited Private State university in Bengaluru, with a state-of-the-art campus that serves as a micro-ecosystem where more than 20,000 learners actively collaborate across diverse streams. The University offers around 72 contemporary undergraduate and postgraduate programmes, covering more than 100 domains of specialisation.

What makes Presidency University a different experience for a student is the symbiotic relationship that the University has with the Silicon Valley of India. Focused on transforming itself into an AI-driven University, the School of Artificial Intelligence and Advanced Computing of the University is spearheading this initiative strategically. In this direction, a **Centre of Excellence has been established in collaboration with NVIDIA.** Rather than being a mere Computer Laboratory, this Centre is a high-performance computing powerhouse designed to give students and researchers the raw processing muscle needed to train complex neural networks and tackle real-world automation challenges. Reinforcing this strategic momentum is the revolutionising of pedagogy. Presidency University is not just introducing a new concept; it is charting a course for the development of next-generation Global Tech Visionaries.

Leading providers of Business Education The B School at Presidency University today carries a different dimension for the future. The accelerated adoption of AI tools to revolutionise teaching techniques, research and
