

innovative curricula clearly gives the school a foreseeable future for each graduate entering the portals of the Presidency Business School. A blend of the traditional model of a business school, with senior experts and practitioners from the industry gathering in a physical classroom, and the adaptability and flexibility of the curricula towards the advancement of AI, has been modelled into the programmes offered by the school.

Over the last decade, Presidency University has made a conscious effort to internationalise B School education. 'Bringing the world to the B School' through diversity of students and faculty, both national and international, adds a different flavour to the learning-teaching process at the School.

Through various exchange programmes, students get an opportunity to study abroad which enhances the overall learning experience. Adding value to the curricula is also the focus on developing softer skills in graduates, both behavioural and societal.

The Presidency Launchpad gives form to the dreams of budding entrepreneurs who would dare to attempt to focus on a start-up hub, while the Makerspaces are hubs for innovative technologies and information, apart from offering a wealth of avenues to venture into. The Presidency Launchpad is a Section 8 Company, acting as an on-campus, innovation-centric Technology Business Incubator, transforming business ideas of students into commercially and financially viable start-ups. The Campus Centres of Excellence established in collaboration with tech giants like NVIDIA, Samsung, Tech Mahindra and Capgemini, to name a few, enable students to hone their technical skills under the guidance of experts from these corporate entities.

Technology flows on the campus; but along with it flows the structured liberal education programmes, the Design and Law and Media Studies programmes, coupled with Commerce and Management, which reign supreme in their respective domains of learning. Across the Presidency campus, a nexus of clubs, spaces and activities encourages students to find a sense of belonging as they build relationships and develop leadership skills by mere participation in all the Department of Student Affairs activities. Sports and allied activities enable the student to have his share of fun, focus on talent and enjoy an environment filled with true comfort in a learning space. In a world that is changing fields almost every day, the Career and Progression Centre of the University ensures that students are empowered to make huge leaps forward with hands-on training in soft skills, boot camps, aptitude and other training that would enable them to turn thoughts into action when they are absorbed by the industry.

***"Presidency Business School has created an opportunity for its students to be different from the usual definition of Business Graduates. With innovative programme offerings, we have ensured that our team is sensitive to the profound changes that are taking place in the global business environment. Our faculty are adapt to the pressures that these changes put on business firms and business schools and hence are quick to adapt to these complexities of change. New ideas, faster rates of innovation, and investment in research are needed for a Business School today. The industry is no longer protected by borders and hence we need to train our new generation to be culturally sensitive and capable of working in a diverse environment."***
