

Q: As Indian businesses expand globally, what capabilities will future managers need to develop to compete and lead effectively?

A: Indian managers have historically done well globally. We see Indians leading some of the world's largest companies and occupying important positions across organisations. The question is what qualities have enabled this success. Some of it is competition and talent, but there are deeper qualities that need to be understood.

Going forward, technical skills alone may not provide the same advantage. What will matter more are human capabilities—sound judgement, critical thinking, asking the right questions, making trade-offs and building relationships.

These capabilities will become increasingly important as technology takes over more tasks. The challenge for education is to bring these human strengths to the forefront.

"In the future, people may want to acquire specific expertise at the time they need it. Leadership education may become more valuable when someone is leading complex organisations"

Q: With the business environment changing rapidly, what do you believe will define the future model of management education?

A: There is significant debate about what the future will look like, and not everyone agrees with my view. But I believe postgraduate business education will
