THE NEW PGDM: CHOICE, DEPTH AND THE FREEDOM TO BUILD YOUR OWN PATH

MCC Boyd Tandon School of Business is where a 188-year academic tradition meets the demands of modern business. It was founded through the vision and support of Chandrika Tandon, an alumna of Madras Christian College, and it offers a PGDM that asks students to learn by doing from day one.

Dr. P. David Jawahar
Director
MCC Boyd Tandon School of Business

What makes MCC Boyd Tandon different?

Our students learn by doing. First-years work with companies every afternoon, and every student builds a venture of their own. Alongside that, they learn to write and argue well, to use Generative AI with judgement. They graduate ready for real work, and they understand whom their decisions affect.

Your first-year students spend every afternoon with industry. How does that work?

Mornings belong to the classroom. In the afternoons, first-years go out on short-term engagements with companies, working on live problems with real deadlines. It changes the discussion in class the next morning. A student who has spent the previous afternoon on a shop floor or with a sales team asks far sharper questions. More than 175 industry mentors stay involved throughout the two years.

Every student also starts a company. Is that realistic within a PGDM?

It is, because venture creation is part of the course, not an extracurricular. Each student takes an idea from a problem worth solving to testing whether anyone will pay for the solution. Not all of them will become founders, it is about building an entrepreneurial mindset. Once you have tried to sell something you built yourself, you look at business very differently, whether you run your own firm or work in someone else's.

Where do liberal arts and storytelling fit into management education?

Right at the center. Analysis is only useful if you can explain it and persuade people to act on it. Our students read, write, debate and learn to build a clear narrative from data. They also learn a foreign language.

How are you approaching Generative AI?

Students learn to connect AI tools to real business tasks, and to recognize where the technology falls short and human judgement must take over. Our collaboration with NYU Shanghai adds an international perspective on how this is unfolding globally.

Why is social immersion part of the programme?

Because leadership without empathy does not last. Our students spend time with communities far removed from a corporate office. They return more grounded and more aware of whom their decisions affect. That, more than any grade, is what I want them to carry into their careers.

What do recruiters find when they hire from MCC Boyd Tandon?

People ready to contribute from day one. MRF, MEI, RRD, RANE, Zetwerk are among the organisations that have partnered with us, and many return. Harvard and Emerald case pedagogy and ACCA-accredited finance and accounting add real depth.

What should a prospective student ask before choosing a business school?

Ask what you will actually do there. Who will you work with, what will you build, and who will you become?

The MCC BTSB Advantage

- 188-year Madras Christian College legacy
- Industry engagement every afternoon
- Every student builds a venture
- Social immersion that builds empathy
- Liberal arts and storytelling
- Applied Generative AI, with NYU Shanghai
