

BOLD WITHOUT COMPROMISE

Flowing metal surfaces and hidden mechanics define this artistic, high-function bar system. The Serendipity Bar from Nivasa is conceived as a spatial anchor. Metal bending and cladding techniques shape the surfaces into continuous, wave-like forms that flow across both the counter and the vertical storage behind it. A matte metallic finish keeps things refined while integrated backlighting adds depth and a sense of drama. Beneath that striking exterior lies a fully automated vertical drop-down storage system. The back panel houses revolving storage units and the bar height adjusts across four to five preset positions depending on use. Everything operates through a fixed built-in interface. What sets the bar apart is how design and engineering support each other. Form and function are not balanced here, they are fused.
