A LIFETIME OF LEARNING, A FUTURE WITHOUT LIMITS

HOW SRM GROUP OF INSTITUTIONS IS BUILDING THE UNIVERSITY OF THE FUTURE

Every institution begins somewhere.

But only a few grow into something that becomes part of people's lives, dreams, and futures.

The story of SRM Group of Institutions began in 1969 with Nightingale School and a simple belief: education should do more than create graduates. It should shape confident, capable, and future-ready human beings.

What started as a small educational initiative slowly evolved into one of India's largest and most respected educational ecosystems.

In 1985, SRM Engineering College was established in Kattankulathur, Chennai, marking the beginning of a much larger vision. Over the years, SRM expanded into Engineering, Medicine, Health Sciences, Management, Law, Science, Humanities, Agriculture, and more, eventually becoming SRM Institute of Science and Technology in 2002.

Today, SRMIST Chennai stands as the flagship campus of the SRM Group.

Spread across 250 acres and home to over 50,000 students, the campus feels like a world of its own, where ideas, cultures, and ambitions come together every single day.

What makes SRM unique is the way learning happens here.

An engineering student collaborates with a law student. A medical researcher exchanges ideas with a management thinker. Innovation flows across disciplines because SRM believes the future belongs to people who can connect knowledge, think creatively, and solve real-world challenges.

That spirit of innovation has already taken SRM students far beyond classrooms.

When SRM students partnered with ISRO to launch SRMSAT, a nano-satellite for environmental monitoring, it became a defining moment for the institution and a reflection of the kind of innovators SRM strives to nurture. Today, SRM alumni are making an impact across more than 60 countries in fields ranging from healthcare and technology to entrepreneurship, law, research, and global business.

But the SRM story does not stop in Chennai.

In Amaravati, Southeast India, SRM University, Andhra Pradesh represents the future of higher education.

Built with a vision far ahead of its time, SRM AP is designed for a rapidly changing world driven by technology, research, and innovation. From artificial intelligence and quantum computing to advanced engineering and interdisciplinary

learning, the university prepares students not just for today's careers, but for the future itself.

Its smart classrooms, research-driven culture, innovation labs, and global collaborations create an ecosystem where students are encouraged to think beyond conventional boundaries. The establishment of the Quantum Reference Facility, the first open-source testing hub of its kind in Asia, further positions SRM AP among globally forward-looking institutions shaping the next era of scientific advancement.

If SRM Chennai reflects the strength of SRM's legacy, SRM AP reflects the ambition of its future.

At the same time, SRM continues extending quality education to regions that have often remained underserved.

SRM University, Sikkim stands in Northeast India with a mission to ensure that geography never limits opportunity. The campus combines global exposure with regional identity, giving students access to world-class education while staying rooted in their culture and community.

This vision continues across SRM campuses in Trichy, Ramapuram, Vadapalani, Sonepat, and Delhi NCR, creating a nationwide network connected by one common goal: empowering students through meaningful education.

And perhaps the most meaningful part of the SRM story is that it begins long before university life.

At SRM Public Schools, students begin their learning journey from Play Group to Grade 12 in environments designed to nurture not just academics, but creativity, confidence, leadership, emotional well-being, sports, and life skills.

Because SRM believes the leaders and innovators of tomorrow are shaped from the very beginning.

For learners beyond physical campuses, SRM's online education initiatives continue the same commitment by making quality education accessible across homes, workplaces, and communities throughout the country.

At the heart of everything SRM has built lies one philosophy: "Empowering to Learn, Enabling to Excel."

More than a statement, it reflects the institution's approach toward education, innovation, research, and student growth.

From a child's first classroom to cutting-edge research facilities, SRM has built an ecosystem that supports learners at every stage of life.

Because SRM is not just building graduates.

It is building futures.

And after more than five decades, that journey is still only getting started.
