

THE EIGHT-POINTED STAR

YEAR: 2013

LOCATION: Middle East

- The 1.46-minute footage captured by an infrared sensor depicts an object resembling an eight-pointed star with arms of alternating length
- It moves within the sensor's field of view, followed by a visible trail

UFO THROUGH THE WINDMILLS

YEAR: 2024

LOCATION: Undisclosed

- A 1.39-minute footage from an infrared sensor aboard a US military platform shows an unidentified object darting through the windmills
- It was submitted by the US Indo-Pacific Command

OTHER FLYING OBJECTS

YEAR: 2020

LOCATION: Middle East

- A nine-second video footage from an infrared sensor aboard a US military platform
- It shows a UAP moving along a straight trajectory from the bottom of the frame to the top, passing close to a vessel at sea

YEAR: 2022

LOCATION: Iraq

- A 10-second video footage captured in a seemingly densely populated habitation
- An accompanying mission report describes the UAP as "flying west to east"

EXPERT VIEW

- Prof. Avi Loeb, head of Harvard University's Galileo Project, says none of the objects in the declassified UAP files is "sufficiently extraordinary" to merit the label of "exotic origin"
- Many images, he says, could be explained as "reflections in the camera optics or human-made objects". Light flashes reported by Apollo astronauts may have been caused by "cosmic rays or micrometeoroids"
