Lexus ES

Lexus has brought the eight-gen ES sedan and has also become part of the new trend of being launched as an EV first. The new ES has grown in size, with a longer wheelbase. Inspired by the latest Toyotas, the ES gets sharp L-shaped DRLs, and headlamps concealed below. The large spindle grille has been replaced by a smooth nose panel, with a smaller slatted grille below. The sides feature a large aero line, marked by a black trim adding to the drama, while the rear features a Kammtail-inspired look. The cabin is minimalist, with a clean interior and layered with tech including a 14-inch infotainment display along with touch-based capacitive buttons, while the driver gets a 12.3-inch digital driver's display. The interiors have been finely crafted and include wood-finish as well as touch-based concealed buttons. The ES debuts with electric powertrain for the first time, that arrives as the ES 500e, using two electric motors, powered by a 75kWh battery pack, that gives it a claimed range of 580km on a single charge. It has access to 343bhp and 438Nm of torque from its AWD electric setup. Lexus will be introducing the hybrid ES to expand its lineup soon.
