Mini ACEMAN

Mini is set to expand its India-lineup with the Aceman. This sits below the Countryman Electric, and is the only Mini to be offered solely with an electric powertrain globally. It is slightly bigger compared to the Cooper hatch, with a longer wheelbase. It is offered with two battery pack options - 38.5kWh and a 49.2kWh pack, that are paired to a single e-motor. The larger battery gets a 218bhp motor and a range of 405km on a single charge. There is also a JCW variant that gets a more powerful 258bhp motor and can launch from 0 to 100kmph in 6.4 seconds. It gets angular headlamps, square wheel arches and rectangular taillamps, while the chunky cladding marks it apart from the Cooper hatch. The interior mimics other Mini cars, with a circular display and a clean aesthetic.

Audi Q5

The new Audi Q5 is based on a new platform, and debuts the brand's all-new design language in India. The grille is smaller, with slim Matrix LED headlamps and a new bumper, while the rear houses a connected LED strip. The overall aesthetic is modern, yet sporty with lots of minor elements, that is a departure from Audi's traditional simplistic design that maximised on linear themes. Inside the cabin gets a 11.9-inch driver's display along with a 14.5-inch touchscreen as well as a third display for the passenger. It also gets a flat top and bottom steering, along with a cabin that is largely driver focussed. The Q5 is offered with many powertrains, including 2.0-litre petrol and diesel motors with FWD or AWD, as well as a range-topping 3.0-litre V6 that makes 367bhp and 550Nm of torque.
