Real Wood Redefined by Lognest

Rooted in the world's finest forests, Lognest transforms 100% real wood into spaces that endure.

There is something timeless about real wood and the way it softens with light and quietly transforms the atmosphere around it. At Lognest, we revere the natural beauty of timber and the quiet individuality held within every grain and texture. By curating 100% real wood from three of the world's finest timber regions, we bring nature's most authentic expressions into spaces designed to feel timeless and alive.

Tailored for architects, interior designers, builders and modern homeowners, Lognest delivers authentic timber solutions across a diverse range of interior and exterior applications including facades, cladding, decking, flooring, wood wall panelling, pergolas, gazebos, cabins and structural designs. Our products are engineered to outperform conventional materials in specialised environments such as saunas and steam rooms, delivering exceptional performance under extreme heat and moisture conditions. This same durability makes Lognest timber solutions exceptionally suited for India's tropical climate.

A Globally Curated Portfolio
Our signature collections draw from three of the world's most celebrated forest regions, featuring an expansive range of thermally modified timber, high-performance IPE wood, and timeless classics including natural oak, pine and ash.

End-to-End Mastery
What sets Lognest apart is complete control. We have built robust in-house capabilities for meticulous control over each stage of production. Our advanced in-house machineries enable us to create virtually any profile, thickness or grooving with exceptional accuracy, ensuring customised solutions tailored for every project. More importantly, at the heart of this expertise is a dedicated thermowood processing facility in Sweden, where every log is carefully selected before undergoing a highly supervised thermal modification process.

Experience It First-Hand
Lognest's flagship Experience Centre at Grand Mall on MG Road, Gurugram, allows visitors to engage with the texture, aesthetics and performance of each material firsthand. Designed as an immersive material library, the centre also serves as a collaborative hub where architects and designers can discover customised timber solutions, ensuring every selection aligns with design intent and performance requirements.

Built on Responsibility
Sustainability remains central to the Lognest approach. From responsibly sourced timber and FSC-certified wood to chemical-free thermal modification processes, every decision we make is guided by our commitment to products that are environmentally conscious and built to last for decades.

Founded by Nishant Bansal, Kapil Gupta & Rajesh Kumar, Lognest is built to bring the world's finest 100% real wood directly to architects and end consumers. Visit our Experience Centre or contact us on +919810027014 for queries.

Nishant Bansal is the owner of a renowned timber company, now bringing premium wood solutions directly to architects & end consumers through Lognest.
