

ENGINEERING EXCELLENCE

Ferris Rafauli shares why the bed is the high performance tool every home needs

BUREAU REPORT

In the world of ultra-luxury design, few names carry as much weight as Ferris Rafauli. Known for his super-prime residential masterpieces, Rafauli doesn't just design rooms; he engineers lifestyles. In this exclusive conversation, he delves into his collaboration with Hästens and explains why the bed is the most critical piece of architecture in any home.

Beyond Comfort

Rafauli rejects the notion of a bed as mere furniture. To him, it is a sleep instrument designed for restoration rather than just rest. "Most people see a bed as something you fall into," Rafauli notes. "But a true sleep instrument is composed, like a piece of design or music. It's not just built for comfort; it's built to perform."

Performance-Driven Design

In Rafauli's projects, the bed is the functional heart of the home. "If the outcome is recovery, the bed isn't just part of the room, it's the purpose of the room," he explains. He insists that lighting, acoustics and materials must all orbit around this single function. "You don't build a room around aesthetics; you build it around intention."

Uncompromising Craftsmanship

For his elite clientele, choosing the Hästens Grand Vividus or drēmər® collection is an inevitability of their high standards. The Grand Vividus alone requires 600 hours of hand-craftsmanship. "It's not about choosing luxury," Rafauli says, "It's about aligning design with the world's best performance. It's the purity of intent."

The Compounding Effect

The result of sleeping on such a surface is a subtle, disciplined recalibration of the body. "You wake with clarity, not resistance," says Rafauli. "Your baseline shifts upward. Once your body adapts to that level of recovery, it begins to expect it in everything else."

Recovery as an Investment

Rafauli believes we have reached a point where recovery is no longer optional. For high-performers like former professional ice hockey player Wayne Gretzky and his wife Janet, this alignment is natural. "Sleep is the most critical form of active restoration," he concludes. "At the highest level, many things can be exceptional, but only one element actually transforms you."
