THE EXPRESSWAY MODEL

Major high-speed road corridors built under the Yogi Adityanath regime since 2017

GANGA EXPRESSWAY
594 km
(Meerut to Prayagraj)
Inaugurated in April 2026

Bundelkhand Expressway
296 km
(Chitrakoot to Etawah)
Inaugurated in July 2022

Lucknow-Kanpur Expressway
63 km
Not fully operational

Purvanchal Expressway
341 km
(Lucknow to Ghazipur)
Inaugurated in November 2021

Gorakhpur Link Expressway
91 km
(Gorakhpur to Azamgarh)
Inaugurated in June 2025

GANGA EXPRESSWAY

594 km LENGTH OF CORRIDOR

120 kmph SPEED LIMIT

6 LANES (EXPANDABLE TO 8)

6-7 hours TRAVEL TIME, DOWN FROM 10-12 HOURS

₹36,230 cr. ESTIMATED COST

TOLL FOR A ONE-WAY TRIP

₹1,800/ car

₹905 two-wheeler

₹5,720 bus/ truck

ROAD TO 2027 PM Narendra Modi and CM Yogi Adityanath at the inauguration of the Ganga Expressway, Hardoi, Apr. 29

ANI

bring down the travel time between Meerut and Prayagraj from the earlier 10-12 hours to 6-7 hours. This cut in travel time, officials say, will directly improve logistics by lowering transport costs, reducing delays and making supply chains more efficient. More importantly, it will bridge the gap between the more urban, industrialised western part of UP with the poorer cousin that is eastern UP, helping a more even spread of growth across the state. This fits in perfectly with the Yogi Adityanath government's development pitch ahead of the 2027 assembly election.

Before the Ganga Expressway, the state accounted for about 55 per cent of India's expressway network; that figure is now close to 60 per cent.

According to Deepak Kumar, CEO, Uttar Pradesh Expressways Industrial Development Authority (UPEIDA), which developed the over-Rs 36,000 crore corridor, the current stretch is only part of a larger long-term plan. "In later phases, the expressway will be connected to Haridwar on the one side and to the proposed Vindhya Expressway through Jharkhand, Chhattisgarh and Madhya Pradesh on the other," he says.

HUBS OF ACTIVITY

The Ganga Expressway follows the "expressway-cum-industrial corridor" model, where infrastructure is meant to trigger parallel economic activity. At the centre of this is a proposed Integrated Manufacturing and Logistics Corridor (IMLC). Under this, the UPEIDA has identified 12 industrial nodes, earmarking about 6,507 acres of land (see *Corridor of Opportunity*). These nodes are designed around the specific economic profile of each district, with a focus on manufacturing, warehousing, e-commerce
