Stone Poet

In Rajasthan, Shreya Srivastava of Studio Shunya turned a site discovery into a climatic solution. Aptly titled Poetry in Stone, the design utilises stone masonry; not merely as a structural material that maintains stable indoor temperatures, but paired with lime, as a strikingly tactile canvas for daily life. The project also features a central swimming pool that acts as a natural AC through evaporative cooling. Eaves made of Bijolia sandstone and salvaged stone brackets protect the interiors. "The discovery of local stone at the site made it the most logical and sustainable choice," says Srivastava. The best part? This home celebrates local masonry while maintaining stable temperatures against the unrelenting Rajasthani heat.

As we navigate the climate crisis, these homes suggest a combination of architectural wisdom and hybrid technology is the way forward.
