Uttar Pradesh has set the goal of establishing itself as India's leading hub for renewable energy. To achieve this objective, the state will undertake comprehensive development in manufacturing, Engineering, Procurement, and Construction (EPC), research and development (R&D), as well as technical and human resource capabilities. Additionally, Uttar Pradesh aims to emerge as a leading state in advancing the "Atmanirbhar Bharat" (Self-Reliant India) mission in the energy sector.

Yogi Adityanath
Chief Minister

collaboration with IIT Kanpur and Harcourt Butler Technical University (HBTU), while the second will be established with IIT (BHU) and Madan Mohan Malaviya University of Technology (MMMUT), Gorakhpur. The mandate of these centres will extend beyond research. They will undertake research on biomass-based and electrolyser-based green hydrogen technologies, promote technology development, build skilled human resources and develop models for industrial applications. Through a hub-and-spoke model, other engineering and technical institutions across the state will also be linked to these centres. Under the Uttar Pradesh Green Hydrogen Policy-2024, each Centre of Excellence will also house an Incubation Centre. A maximum of three incubators will be supported during the policy period. Each incubator may accommodate up to 10 startups. Under this initiative, the government has provisioned a maximum financial incentive of ₹25 lakh per startup per year for a period of five years.

Accelerating Green Energy Infrastructure

Green energy is not limited to power generation alone; its effective utilisation also requires robust infrastructure. With this objective, the Yogi Government has introduced a new initiative to promote electric vehicle (EV) charging infrastructure across the state. Public EV charging stations will receive a 20 per cent tariff rebate on electricity consumed during designated solar hours (9:00 a.m. to 4:00 p.m.). The objective is to maximise the utilisation of affordable solar power available during the day while reducing the operating cost of electric vehicles. This initiative is expected to accelerate EV adoption across the state. At the same time, to fast-track large-scale renewable energy projects, Coal India Limited and Uttar Pradesh Rajya Vidyut Utpadan Nigam Limited (UPRVUNL) have entered into a Joint Venture Agreement. Under this partnership, a joint venture company with a 51:49 equity structure will be established to develop ground-mounted solar, floating solar, rooftop solar, wind energy and pumped storage projects. The partnership aims to meet the state's growing electricity demand through clean and sustainable sources of energy. By combining Coal India's financial strength and project management expertise with UPRVUNL's local experience, the Government plans to create large-scale green energy infrastructure while enhancing energy security and reducing carbon emissions.

Uttar Pradesh's green energy strategy extends well beyond increasing electricity generation. It is equally focused on creating employment, attracting investment, promoting industrial development and strengthening environmental sustainability. While the rapid expansion of residential rooftop solar has generated employment for thousands of people, it has also led to the emergence of a new local ecosystem encompassing solar equipment manufacturing, installation services and maintenance.
