

HARVEST OF PROSPERITY
HOW MADHYA PRADESH IS SCRIPTING INDIA'S AGRICULTURAL DESTINY

Madhya Pradesh is undergoing a steady structural shift in its agrarian economy, moving from traditional subsistence farming to a technology-driven, market-linked enterprise. Under Chief Minister Dr. Mohan Yadav, the state government has declared 2026 as the "Year of Farmers' Welfare" (Kisan Kalyan Varsh)—a move that goes beyond routine policy support, aiming instead at a longer-term realignment of the state's rural economy.

CORE STRATEGIC FRAMEWORK & POLICY CONVERGENCE

- **Inter-Departmental Matrix:** To cut operational friction, 16 key state departments—including Agriculture, Horticulture, Animal Husbandry, Fisheries, Cooperatives, MSME, Revenue, and Energy—now operate under a single governance model: "Farm to Factory and Factory to Market." This links raw cultivation directly with industrial processing and export channels.
- **Irrigation Capacity Expansion:** State irrigation potential has grown from 7.5 lakh hectares in 2003 to 65 lakh hectares today, with an active project pipeline targeting 100 lakh hectares.
- **National IP Record:** Madhya Pradesh became the first state in India to secure 12 Horticultural Geographical Indication (GI) tags in a single allocation.

RECORD HARVESTS & YIELD DYNAMICS (2023–24 VS. 2024–25)

Supported by better seed distribution, expanded canal networks, and improved soil-health practices, total foodgrain production rose from 607.73 lakh MT to 670.28 lakh MT within a single agricultural cycle, driven largely by strong wheat and maize yields.

- Wheat Milestone: Annual wheat production crossed 382 lakh MT (+16.2% YoY), reinforcing MP's role as a major contributor to the national food security pool.
- Maize Surge: Industrial demand and crop diversification pushed maize output up nearly 65% YoY to 81.20 lakh MT.

THE PULSE BOWL & SUMMER CROPPING INNOVATION

Madhya Pradesh remains India's largest pulse producer overall, while ranking #2 nationally in Gram (Chana), Lentil (Masoor), and Black Gram (Urad). One of the season's key gains has been turning fallow summer land into a productive third crop cycle.

DIRECT MARKET BUFFERS & PROCUREMENT

To protect growers from open-market price swings, the government carried out large-scale direct procurement:

- Gram Procurement (2025–26): 2.71 lakh MT procured at MSP from 91,361 farmers (₹1,592 crore transferred directly via DBT).
- Summer Moong Procurement: A record 7.72 lakh MT procured from 2.74 lakh farmers (₹6,706 crore in direct payouts).

WATER SECURITY, POWER & DIGITAL INPUT INFRASTRUCTURE

Long-term stability depends on assured water supply rather than monsoon dependence. Two major river-interlinking projects—costing close to ₹1 lakh crore—form the backbone of the state's water strategy:

- **Ken-Betwa & PKC Links**: The Ken-Betwa link is addressing water scarcity in Bundelkhand, while the Parvati-Kalisindh-Chambal (PKC) link will supply 13 districts across Malwa and Western MP.
- **District Lift Irrigation (₹5,000 Crore):** Projects in Barwani—including Sendhwa, Niwali, Pati,
