NEW SPAWN, NEW DAWN

The Ujani project will rejuvenate 100 sq. km of the dam and its embankments

- The BNHS-helmed Ujani Wetland Eco-restoration and Fisheries Development Program will remove invasive fish, reintroduce indigenous fingerlings
- By Jan. 2027, 1 million Rohu, Katla and Mrigal fingerlings, 2.2 million endemic varieties like Bobri, Kolshi, Khavlya, and 1 mn Deccan Mahseer will find a home in the Ujani
- Illegal fish farms on the banks breeding Mangur will be shut down, their stocks destroyed. Local fishermen are being incentivised to remove invasive fish species
- Native otters to be reintroduced to help save riverbank ecosystem, control tilapia and suckermouth populations
- Local plants and grasses like water lily, sweet flag, alocasia sp, brahmi, vetiver grass, etc., will be planted to prevent erosion, shore up riverbanks
