

79.2%

Share of Indian women aged 15-24 using hygienic menstrual protection (NFHS-6). This is a steep rise from NFHS-4, which reported 57.6%

ity, Greater Noida. "Many adolescent girls today understand the importance of changing menstrual products regularly, maintaining personal hygiene, and seeking medical advice when they experience abnormal symptoms," adds Dr Shilpa Ghosh, senior director & unit head, Obstetrics & Gynaecology, Max Super Speciality Hospital, Dwarka, Delhi.

CARE FOR EVERYONE

Newer companies are tackling problems once inconceivable due to India's menstrual illiteracy. Plush, a Bengaluru-based feminine hygiene startup, was started in 2018 when founders Ketan Munoth and Prince Kapoor noticed a problem women kept complaining about—pad rash. "That trigger set us down a long path of R&D," says Munoth. The founders spoke to around 500 women and spent nearly two years developing their first product through five rounds of testing. Today, Plush's sanitary pads use a 100 per cent American cotton top-sheet instead of a synthetic fabric to reduce skin irritation. The company nearly doubled its revenue in FY24 and raised Rs 40 crore in 2025.

New product formats are also easier to adopt. Pee Safe sells reusable menstrual cups made from medical-grade silicone, safe for long-term use. In just six months of 2024, they sold nearly one million period panties, which offer 360-degree absorption comparable to multiple sanitary pads. The company reported a sharp rise in revenue in FY25, suggesting that products once considered niche are finding mainstream consumers.

Sirona has introduced products such as the portable menstrual cup steriliser, which can sterilise a cup in about a minute and doubles as a hygienic storage case. Acquired by Good Glamm Group in a Rs 450-crore deal, it was quickly bought back by its founders. On the rise in adoption, founder
