1.1 metres

Main explosive charge

Guidance system

Precursor charge

TOP-ATTACK CAPABILITY
The missile can attack armoured vehicles from above, targeting the vulnerable upper portions of vehicles, rather than relying solely on frontal engagements (direct attack)

IMAGING INFRARED SEEKER
Uses an imaging infrared seeker to acquire and track targets based on their thermal signatures, enabling day-and-night operation

TESTED IN CONFLICT
Entering service in 1996, Javelins were used in US's 2003 invasion of Iraq, and in Afghanistan. Ukraine used Javelins against Russian armour in the early stages of the ongoing war

WHY NOW

The catalyst is the shifting threat matrix along the Line of Actual Control (LAC), specifically China's deployment of the ZTQ-15 'Black Panther' light tank, a highly mobile platform engineered specifically for the steep, oxygen-deprived terrain of Ladakh

EXISTING ATGMs OPERATED BY THE INDIAN ARMY

SPIKE-LR
Advanced Israeli-made electro-optical, man-portable, fire-and-forget ATGM. India has around 260 units

NAG
Indigenous, third-generation, fire-and-forget ATGM developed by DRDO with range of 7.5 km

KONKURS-M
Man-portable, wire-guided Soviet-origin ATGM made under licence by Bharat Dynamics Ltd (BDL). Widely used by the army; designed to defeat explosive reactive armour

MILAN-2T
French-origin man-portable, wire-guided ATGM made under licence by BDL
