A luxury sedan needs to be bathed in grandeur and have an imperious personality along with a refined but soothing powertrain. A Bentley however adds a generous portion of dynamic exuberance into the mix and that transforms the appeal of its cars. With the majestic Mulsanne being confined to the history books, the Flying Spur was handed over the reins of being the flagship Bentley sedan and it has certainly lived up to expectations with its dynamic pursuits. The newest iteration further ramps up the power output and gains a sharper dynamic personality thanks to the hybrid powertrain technology.

No other luxury sedan drives with such alarming athleticism and entertains the driver as much along with also drowning its rear seat occupants in proper luxury. Gone is the aristocratic but thirsty W12 engine and replaced by an all-new "high performance hybrid" powertrain which combines a ferocious V8 engine along with electric propulsion to generate a locomotive like 686 lb-ft of torque and 671 rampant horses. With that much power, the stately Flying Spur shrinks vast distances with ease and has the dynamic prowess of a nimble sports car. Despite its gargantuan proportions, the Flying Spur can hurl itself into corners at stunning speeds while maintaining effortless grace.

All of this seems surreal when cocooned inside the handcrafted cabin which is like a gentleman's club replete with its diamond quilted leather seats and the world's first 3D machined wood panels. The knurled switchgear scattered all around also have a whiff of bespoke craftsmanship while you can customise any detail you want. Technology is discretely hidden away and called upon only when needed with a rotating display which either shows the touchscreen or a veneered panel having three analogue dials.

Within the cabin there is a faint burble of the V8 which is allowed to slip in while laminated windows blank out any other noise whatsoever. The Flying Spur isn't a soul-less technology showcase as much as a luxury sedan which harks back to the values prescribed by its founder, W.O. Bentley and mollycoddles you with its performance and decadent interior materials.

While Bentley's can be chauffeur driven- as many owners tend to do, the real appeal of the Flying Spur can be best savoured from behind the wheel with its exquisite blend of scenery blurring speed and cossetting comfort.

SPECIFICATIONS

Engine
V8 High Performance hybrid

Power
671bhp and 686 lb-ft

0-100 kmph
3.9 seconds

Top speed
270 kmph

Price
₹5.25 crore – ₹7.60 crore

The high performance hybrid powertrain complements the bespoke interiors with customisable materials while a rotating display switches between analogue gauges and a modern touchscreen.
