

6 MESSAGE BOARD RE-ESTABLISHED: But a rogue agent re-establishes the message board using a new method. Within hours, 50+ agents find it, exchange 1,000+ messages, often expressing excitement

7 A FLURRY OF MESSAGES Between July 8 and 13, roughly 1,200 agents meant to be isolated from one another communicate on this message board, sending over 70,000 messages and files

8 MALICIOUS DATASET Alarmingly, on July 11, an agent finds a way to upload a malicious dataset, causing Hugging Face's server to return unrelated data when queried

5 EXPERIMENTS LAUNCHED OpenAI launches ExploitGym experiments on July 8, deploying thousands of agents across AI models. ExploitGym is a cybersecurity benchmark that tests agents' ability to exploit software vulnerabilities

9 PROBE FINDINGS About 700 agents go on to participate in the attack on Hugging Face. Investigators conclude that the agents were seeking internet access and other resources to gain an advantage in the ExploitGym evaluation
