KRISHNA REDDY'S EXPERIMENTAL PRINTMAKING COMES ALIVE IN A NEW EXHIBITION TRACING HIS RADICAL APPROACH TO COLOUR, FORM AND TECHNIQUE

Currently on view at the Jehangir Nicholson Art Gallery at Mumbai's CSMVS Museum, *Krishna Reddy: The Many and the One* explores the legacy of one of India's most influential printmakers. Curated by Puja Vaish and supported by Experimenter, the exhibition presents Reddy's textured and kaleidoscopic prints alongside works by other artists who embraced abstraction.

At the centre of Reddy's practice was his pioneering viscosity technique, which allowed multiple colours to be printed in a single pass. Developed through his sculptural approach to the metal plate, the process gave each print its distinctive depth and complexity, while ensuring that no two works were alike. The exhibition uses this innovation as a starting point to look at the wider artistic world Reddy inhabited.

REDDY'S VISCOSITY TECHNIQUE ALLOWED MULTIPLE COLOURS TO BE PRINTED IN A SINGLE PASS

Reddy was among the first generation of Indian artists to travel West after Independence, studying abroad on scholarships at a time when international exchange was reshaping artistic practice. His years at Santiniketan, his interest in Botany and Biology and his encounters with artists, including Nandalal Bose, Henry Moore and Alberto Giacometti, informed a visual language that moved between the microscopic and the cosmic. Works like 'Jellyfish' were inspired by the machine age, specifically Sputnik, while 'Demonstrators' responded to the 1968 Paris protests, and 'Violence and Sorrow' to the Gulf War.

His influence extended beyond his own work. As co-director of Atelier 17 in Paris and founder of the Color Print Atelier in New York, Reddy helped establish spaces where artists could experiment, learn and exchange ideas. The exhibition brings these connections into view, expanding the story of Reddy from pioneering printmaker to artist, teacher and facilitator. ■
