Get your snooze on and wake up feeling refreshed with the right mattress

By RIDHI KALE

Not so long ago, at launches and previews, around sleek bed frames with slender champagne glasses in hand, design debates often revolved around whether the sage green or terracotta wall trim best cultivated a mindful sanctuary. The mattress itself? Treated like an embarrassing family secret. A utilitarian block of foam to be buried as quickly as possible beneath layers of organic linen, silk duvets and strategically placed throw pillows. Mercifully, a silent bedroom coup has been taking place. The focus has aggressively pivoted from how a bed looks to how it actually performs.

That's exactly where Duroflex Duropedic Airboost 6.8 Arctic Ice Pro comes in. Unlike dense foam slabs of yesteryear, Airboost, by contrast, deploys what Duroflex calls an AirKnit™ layer. This is a microscopic network of

interconnected mesh fibres that functions as over 1 lakh independent micro-support points. Acting like microscopic shock absorbers, these points work in tandem with a five-zone orthopaedic system to map out body weight in real-time. The result? Firm resistance is automatically sent to the hips, while lighter zones are gently cradled, locking the spine into a neutral position.

Then there is the issue of heat. Yes, air conditioners work well in keeping you cool but even an 800-thread-count sheet cannot save a sleeper if the mattress underneath acts as a giant heat reservoir. This mattress ditches solid foam for an open-filament design rendering it three times more breathable than standard market alternatives. Air and moisture are flushed out continuously, making the mattress inherently hygienic and moisture-repellent. Furthermore, the surface is engineered to dissipate heat on contact, dropping the surface temperature by up to 3°C.

The features don't end here. By simply unzipping the outer casing, the entire bed can be flipped and transformed in under two minutes. So, one side can deploy Airboost Lite for targeted orthopaedic alignment, while the reverse side relies on neo latex for a plush, responsive bounce.

The consensus among experts is clear, the ultimate modern luxury isn't a colour palette, an expensive antique frame or a brand name. The ultimate luxury is waking up without a backache.
