After spending over a decade designing luxury residences, one thing I have come to understand is that people don't actually want more technology in their homes. What they truly want is less friction when going through their day-to-day routines. That distinction, honestly, changes everything about where an automation upgrade should begin and it's worth thinking through room by room rather than device by device.

For most individuals, we have seen that the natural starting point is light. Smart lighting has moved from being a niche upgrade to something far easier to bring into any home and human-centric lighting (HCL) in particular is worth understanding. These systems are created to shift with the day, warmer and gentler through the morning, brighter through hours of focus, softening again by evening. In one of our projects, designed for a family of four with different routines, HCL became central to

**AIR QUALITY AUTOMATION, PURIFIERS AND HUMIDIFIERS THAT READ POLLUTION OR HUMIDITY LEVELS AND ADJUST ON THEIR OWN ARE A SMALL ADDITION, BUT ONE THAT CHANGES HOW A HOME GENUINELY FEELS TO BREATHE IN**
